

Log Retention Service

Log Retention Service is a managed security offering that will enable you to preserve 100 percent of logs on your network to satisfy data retention requirements for a wide range of compliance mandates. Utilizing Splunk's universal indexing capabilities, BESECURE's Managed Log Retention customers will be able to collect, index and secure all security data from any application, server or device, such as firewalls, routers, computer servers, network intrusion prevention and detection systems, databases, etc. while keeping them secure and always available within BesecureCloud, an ISO27001 resilient and secure datacenter infrastructure platform.

BESECURE's log management solution provides a fully-indexed, searchable repository of all log activity from any device on the network, provides customers better visibility and control through rich reports and dashboards and enables thorough security response with real-time search. BESECURE custom made Network Security & Window Security Dashboards provide advanced investigation, searching, reporting and event correlation features to encounter emerging Advanced Persistent Threats (APTs)

Service Highlights

- Collect and archive the raw logs in such a way that they are tamper-proof and forensic quality, thus meeting PCI DSS, SOX and other compliance requirements
- Highly efficient & resilient log storage powered by BesecureCloud Platform
- Powerful compliance reporting and log search capabilities
- BESECURE custom forensics analysis minded security dashboards provide advanced investigation, searching, reporting and event correlation features to encounter emerging Advanced Persistent Threats (APTs)
- Zero cost implementation, management or maintenance overhead

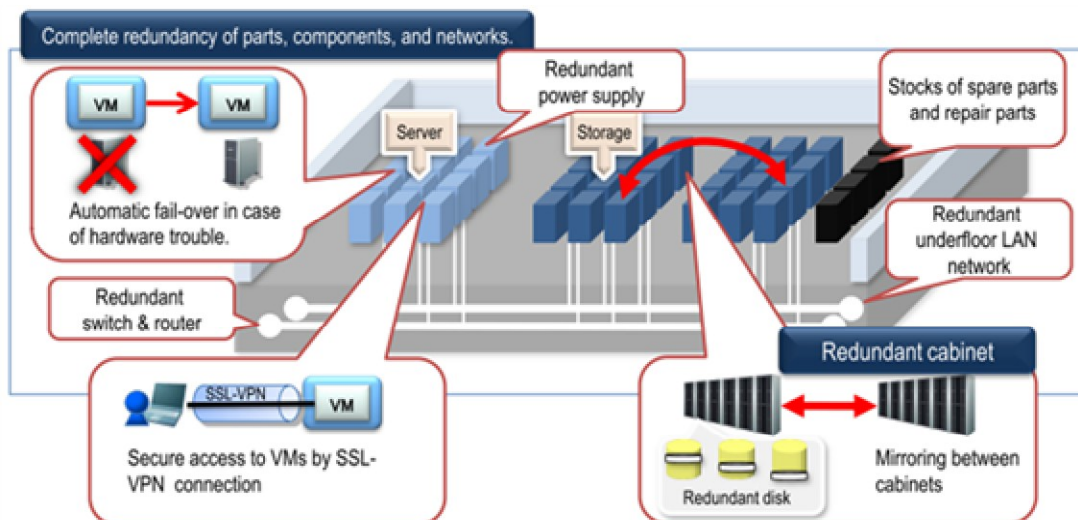

Service Benefits

BESECURE Log Retention Service offers customers unique benefits, including the following features and value:

- Satisfies log retention requirements for PCI DSS, SOX and other regulations
- Provides on-demand access to all log data
- Supports security and network troubleshooting
- Maintains forensically sound log data for investigation and court proceedings
- No management or maintenance overhead
- Integrates seamlessly with other services for total security and compliance solutions

Service Infrastructure

The BesecureCloud Platform, hosted in a ISO27001 certified Fujitsu-owned Tier-3 UK Data Centre (the only one outside of the USA certified "Gold" by the Uptime Institute), is built using the latest enterprise technologies to ensure no single point of failure. In case of server fault, a new instance will restart on another server. Data is stored on RAID 5 protected storage, with further protection provided using mirroring between storage cabinets. The Internet Connection is fully redundant, with a switchover time for equipment failure often less than one minute.

About BESECURE

BESECURE, one of the most trusted Governance Risk and Compliance solutions and services Providers, provides Compliance Services based on legal and regulatory requirements, designs and implements advanced IT security solutions, delivers information Security Training Seminars, provides Managed Security services, performs Penetration Tests and Vulnerability Assessments covering all phases of the life cycle of information security. BESECURE applies a certified Quality Management System according to ISO 9001:2008 and a certified Information Security Management System according to ISO 27001
