

# McAfee ePolicy Orchestrator Installation Services

## McAfee ePolicy Orchestrator Installation

McAfee ePolicy Orchestrator (ePO) is the industry-leading system security management solution. As the central hub of McAfee system security solutions, administrators can keep protection up-to-date, configure and enforce protection policies, proactively mitigate the risk of rogue non-compliant systems, and monitor security status, 24/7, all from one centralized, enterprise scalable console.

## Package Overview

This consulting service is designed to provide you with an new ePO Server environment configured according to BESECURE best practices within the context of your environment and operating procedures. The latest ePO Agent and VirusScan software will be deployed successfully across a sample of test machines. In addition, the BESECURE security engineers will highlight any security concerns that they believe still need to be addressed along with other recommendations as appropriate

## Installation

The BESECURE Professional Services consultant will work with your staff to develop a plan for the ePO installation. Activities include:

- Gaining an understanding of your Network Infrastructure and Anti-Virus Strategy
- Running an installation planning and design workshop

## Installation Planning

Following the development of the installation plan, the consultant will install, configure, and then test the new technology. Specific tasks performed are:

- Installation of the new ePO Server software
- Creation/refinement of the ePO database, directory structure and repositories
- Configuration of ePO policies and tasks
- Rollout of the ePO Agent (latest version) and VirusScan software to up to 10 test nodes (pilot environment)
- Validation of the pilot implementation

## Deployment Support

- Advice ePO Agent rollout and AV installation strategy
- Advice operational and administrative procedures for ongoing management of the new ePO and Anti-Virus software implementation
- Knowledge transfer to up to two of your administrators on the installation, configuration and management of the new version of ePO
- Documentation – an Activity Report detailing the tasks undertaken and providing details of any non-standard configuration settings or procedures that have been implemented

## Pre-Requisites

The client is responsible for providing access to any required platforms, including systems, network hardware, storage devices and operating systems.

Additionally, prior to delivery of the service it is required that:

- Client point of contact assigned for engagement
- Access to a desk, internet connection and phone is available for the BESECURE Professional Services consultant
- Client's Security and anti-virus policy provided to BESECURE Professional Services consultant
- Client's Network maps provided to BESECURE Professional Services consultant
